Type: ROUTINE INSPECTION
Date: Jan-29-2014

2.40 (a) (1) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** The facility still does not have an attending veterinarian or a written program of vet care available for review. Per this regulation, the facility must have an attending veterinarian and the formal arrangements with the vet need to include a written document which outlines health care management of the animals and indicates regularly scheduled visits by the attending veterinarian. Vet care needs to be addressed to assure the health care needs of the animals are being met.

3.1 (a) REPEAT

HOUSING FACILITIES, GENERAL.

*** Three dogs are housed in 2 old tiger enclosures. These enclosures are not being maintained and are in disrepair. There are several sections of the wood frame around the enclosure and around the shelter area that is chewed and now unsealed wood that is pervious to moisture. These areas of wood have rough edges and some of the wire mesh is also in disrepair. These dogs need to be moved to another enclosure that is maintained in good repair for their safety and well being.

3.125 (a) REPEAT

FACILITIES, GENERAL.

*** The shelter area for the wolf "Jerico" is still in disrepair with a section of wood missing just to the right of the shift door. This shelter needs to be addressed and kept in good repair for the safety of the animal.

*** There is still a section of chain link broken and protruding into the younger bear "Gus's" enclosure. This section of chain link needs to be addressed for the safety of the bear and to keep the enclosure in good repair.

Inspection Report

3.125 (c)

FACILITIES, GENERAL.

*** The facility has been feeding out fresh meat the past few feeds for the large cats. There was no fresh meat available and the chicken intended for the next feed was still frozen in boxes being stored on the porch of the house. The food is being thawed in the structure prior to being fed out, however this structure is housing dogs, the fridge inside is dirty with rotting food and the area near the stove is dirty. This area does not protect the food supplies from contamination during the thawing process.

Correct by: Feb 25, 2014

3.125 (d)

FACILITIES, GENERAL.

*** The facility is pulling out dead animal parts from previous feedings but the waste is being left near the shelter boxes inside the perimeter. In addition, there are frozen dead animals left near the butcher area covered with snow. Provision needs be made for the removal and disposal of animal and food wastes, bedding, dead animals, trash and debris throughout the winter to reduce disease hazards in the spring. This needs to be addressed for the health of the animals.

Correct by: March 1, 2014

An exit briefing was conducted with a facility representative at the time of the inspection.
